BEST AVAILABLE IMAGES

Defective images within this document are accurate representations of the original documents submitted by the applicant.

Defects in the images may include (but are not limited to):

- BLACK BORDERS
- TEXT CUT OFF AT TOP, BOTTOM OR SIDES
- FADED TEXT
- ILLEGIBLE TEXT
- SKEWED/SLANTED IMAGES
- COLORED PHOTOS
- BLACK OR VERY BLACK AND WHITE DARK PHOTOS
- GRAY SCALE DOCUMENTS

IMAGES ARE BEST AVAILABLE COPY.

**As rescanning documents *will not* correct images,
please do not report the images to the
Image Problem Mailbox.**

In the Specification

Please replace paragraph 2 on page 7 with the following:

An adhesive 110, such as glue droplets or dots, is disposed on the outer label back surface 102 adjacent to a label leading edge 112 for temporarily adhering or coupling the outer label 100 to the inner label 205 as discussed below. In one embodiment, the adhesive 110 is temporary adhesive.

Alternatively, the adhesive 110 is disposed on the inner label front surface 272. In another embodiment, there is no inner label 205 and the adhesive 110 is disposed directly on an exterior surface of the container 200. Further note that instead of temporary adhesive, other materials or methods may be used to temporary ~~adhere~~ couple the outer label 100 to the inner label 205 such as applying water between the inner label 205 and the outer label 100, providing static electricity between the inner label 205 and the outer label 100, or applying a pressure to the outer label (e.g., near a leading edge 112) positioned against the container 200. An advantage to using adhesive alternatives is that it makes recycling of the inner label 205 and the outer label 100 easier.

Please replace paragraph 3 starting on page 8 with the following:

As shown in FIG. 2, the outer label 100 is temporarily adhered or coupled to the front surface 272 of the fixed inner label 205 by the adhesive 100 or other adhesive alternatives to temporarily secure the outer label 100 to the container 200. Specifically, by ~~adhering~~ coupling the outer label 100 to the inner label 205 with only the adhesive 110, the adhesive 110 acts to temporarily secure the outer label 100 to the container 200 (e.g., via inner label 205) while the outer label 100 is wrapped and secured about the container 200. The adhesive 110 is configured to permit the outer label 100 to be detached from the inner label 205 once the outer label 100 is secured about the container 200, such that the outer label 100 may be

rotated relative to the inner label 205 and the container 200 as discussed below.

It should be understood that while FIG. 2 illustrates the adhesive 110 as including three glue dots disposed on the outer label back surface 102, those skilled in the art will appreciate that different numbers, sizes, shapes, and patterns of adhesive 110 may also be effectively employed. Further, the adhesive 110 may be applied to a front surface on the inner label 205.
